

Assignment 3D: Digital Mockup

Yi Zeng, Annabelle Martin, Claudia Soebagijo, Kevin Wu, Sahana Hegde

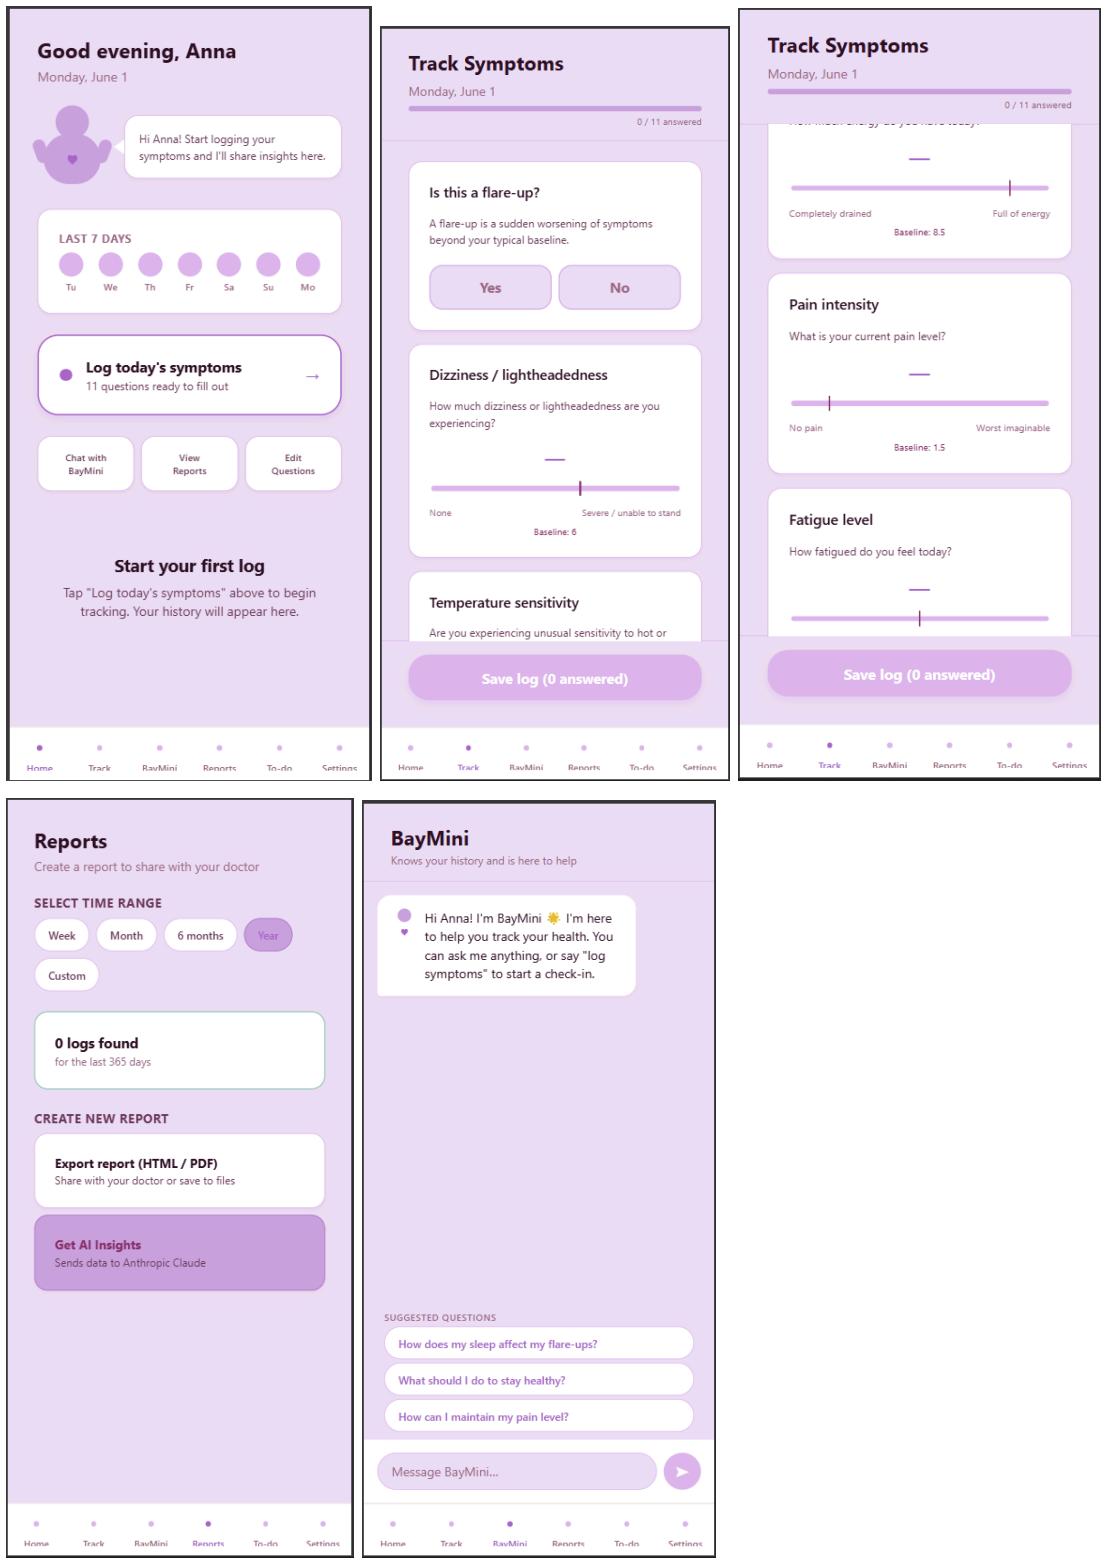

Section A

Baymini tasks:

- Medication reminder and summary
- **Log symptoms, normally and during flare-ups**
- **Communicating full impact of conditions to their doctors**
- View Trend/Trigger Analyses, Predictions, and Recommendations
- Explain conditions to friends, professors, or employees

Github repo: [3annabellem/Baymini](https://github.com/3annabellem/Baymini)

Overview:

Log symptoms, normally and during flare-ups

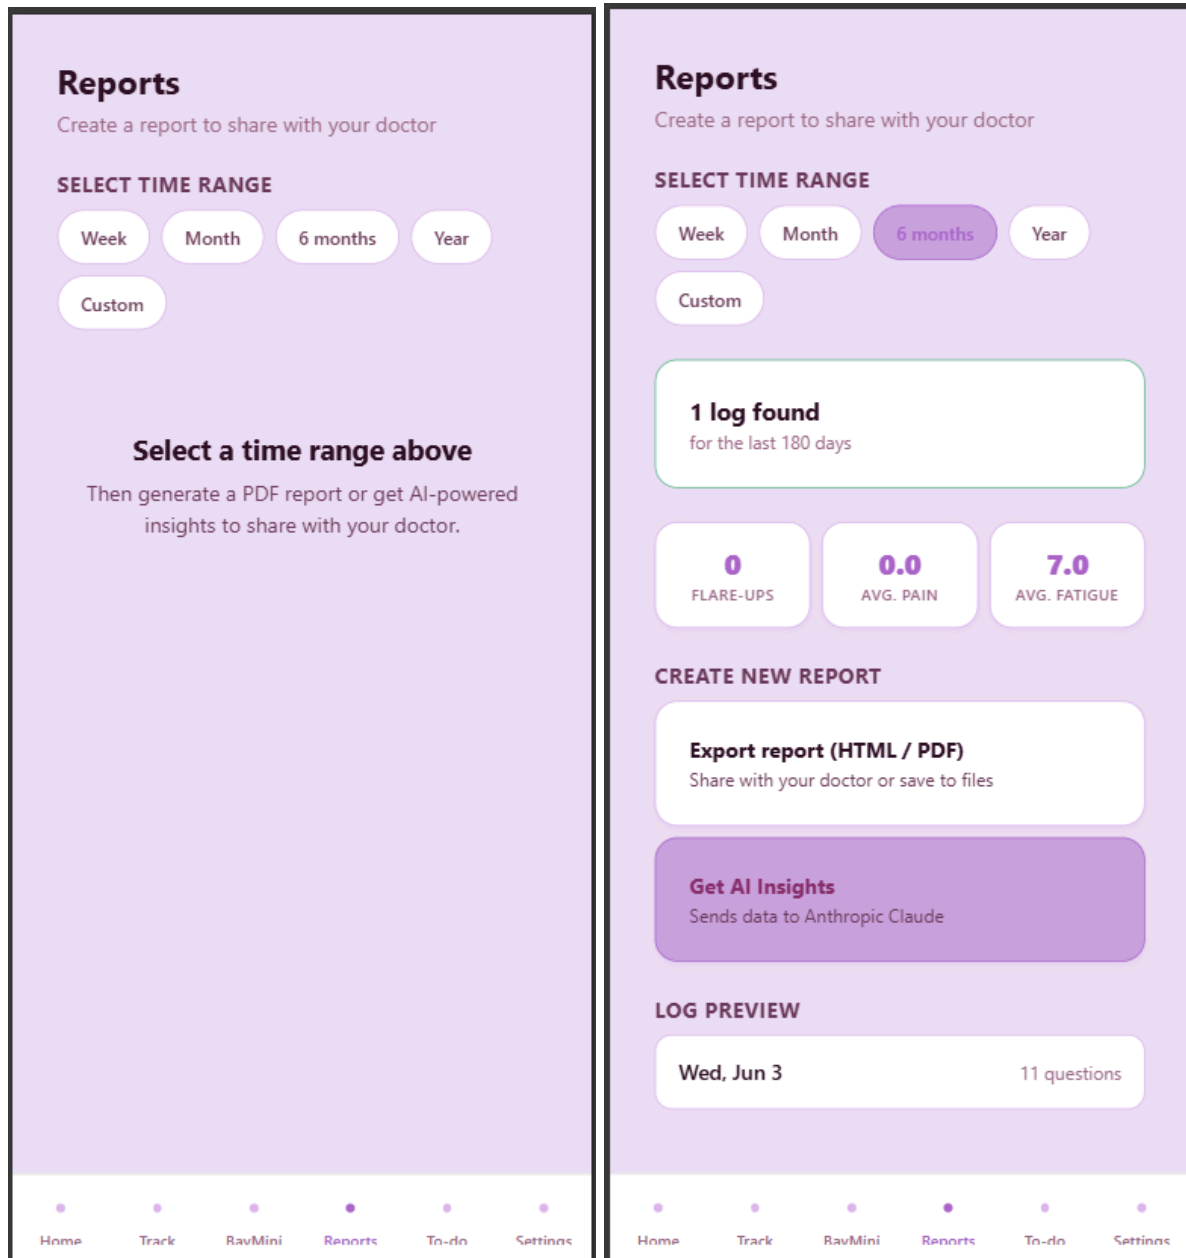

The app interface consists of five screens, each titled "Track Symptoms" for Tuesday, June 2. Each screen has a progress bar at the top indicating the number of questions answered out of 11. The bottom navigation bar includes icons for Home, Track, RawMini, Reports, To-do, and Settings.

- Screen 1 (0/11 answered):** Contains three questions: "Is this a flare-up?" (Yes/No buttons), "Dizziness / lightheadedness" (scale from None to Severe, Baseline: 6), and "Temperature sensitivity" (Are you experiencing unusual sensitivity to hot or cold temperatures?). The "Save log (0 answered)" button is at the bottom.
- Screen 2 (1/11 answered):** The "Is this a flare-up?" question is answered "No". The "Dizziness / lightheadedness" question is answered with a value of 3.5 (scale from None to Severe, Baseline: 6). The "Save log (1 answered)" button is at the bottom.
- Screen 3 (3/11 answered):** The "Temperature sensitivity" question is answered with a value of 7.5 (scale from None to Severe, Baseline: 5.5). The "Overall wellbeing" question is answered with a value of 2 (scale from Very poor to Great, Baseline: 2.5). The "Save log (3 answered)" button is at the bottom.
- Screen 4 (11/11 answered):** The "Overall wellbeing" question is answered with a value of 8.5 (scale from Very poor to Excellent, Baseline: 7.5). The "Flare-up currently happening" question is answered "No". The "Additional notes" section contains the text "Very warm today, ~83 degrees". The "Save log (11 answered)" button is at the bottom.
- Screen 5 (11/11 answered):** A "Saved" status is shown at the top. The "Update log (11 answered)" button is at the bottom.

Users can log their symptoms daily, with a variety of types of questions, including scales, yes/no, multiple choice, and free entry. If they want, users can share their diagnosis to the app

(if they have one), and the app can recommend questions based on that diagnosis. Users can also create their own questions if they want, so that their experience is fully personalized.

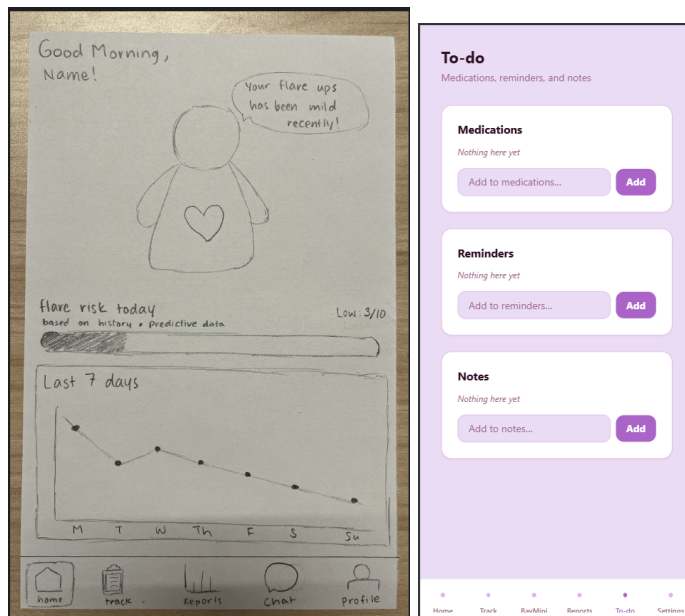

Communicating full impact of conditions to their doctors

Users select a time range for which a report is generated, and this report contains all the important information the user and doctor might need going into an appointment. This generation can include the use of AI or not, based on user preference. Some users may want more powerful analysis and insights into the data, and some users might value the privacy of their data and not want it shared with third party sites.

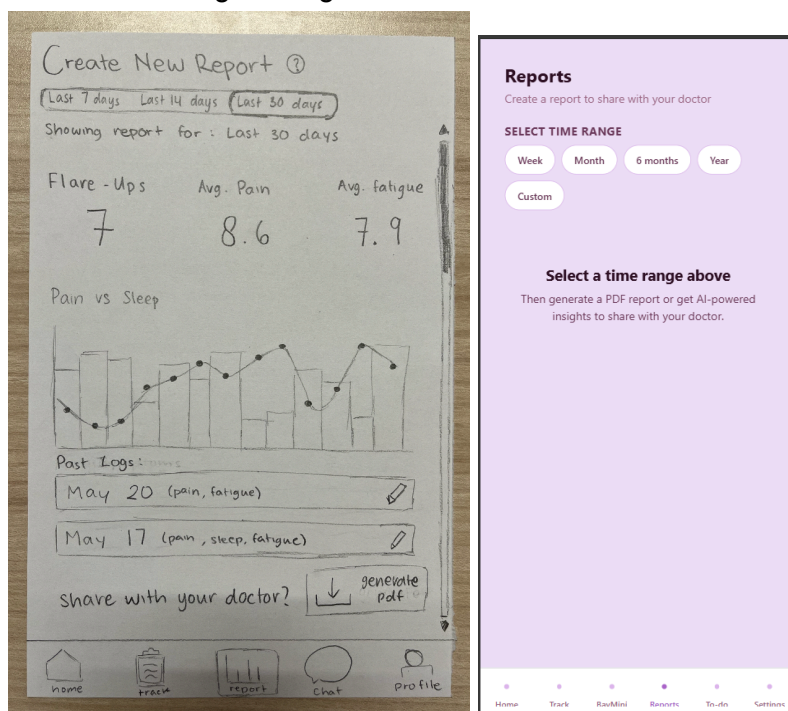

Design decisions made

1. New tab: todo page

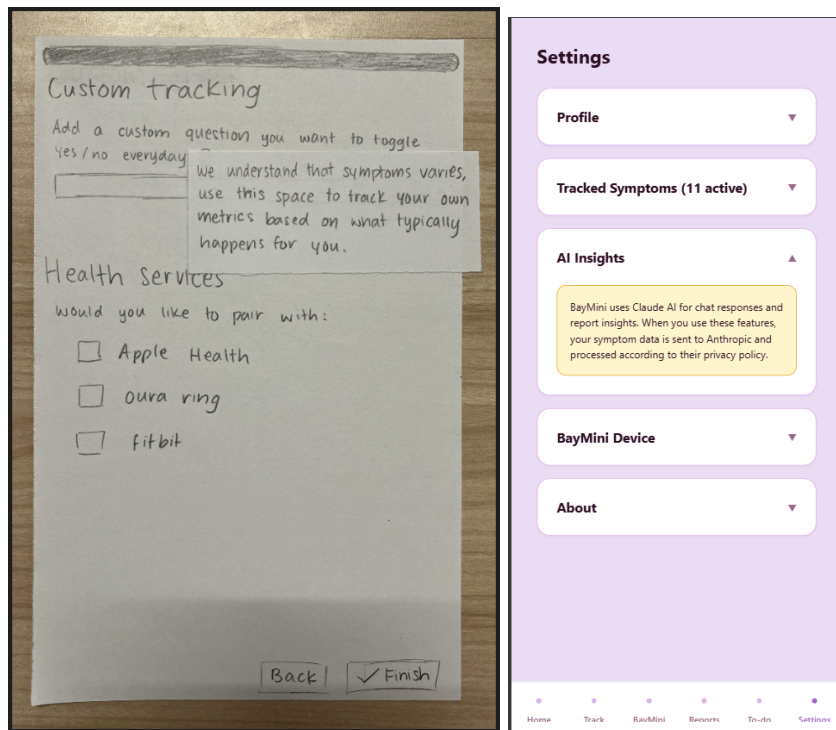

This was made to address the Medication reminder and summary task, giving the users a page dedicated to medications, reminders and notes to self.

2. Time range change

This was to address typical lengths between doctor appointments. 6 months and a year are more common lengths of time between doctors appointments than 2 weeks.

3. AI insight toggle

As previously mentioned, some users might want to use AI, some might not. We thought it would be important to give the user that choice.
