Concept Video Storyline

Define the context, actors, and conflict + resolution that will demonstrate the importance of your problem and showcase the power of your proposed solution.

Context: BayMini is a companion device that can help users with chronic pain to log their symptoms when they are experiencing flare-ups. Based on our research, traditional health tracking apps require too much work especially when they are in pain. Our participants commonly mention that they try to push through the pain, but it comes back much worse later on. They also mentioned that they want to figure out what triggers these flareups, and that their conditions change over time, so it's really hard to track it. One specifically said that it was hard to describe her pain to doctors, which meant that it was harder to get diagnosed.

Actors: Two members from our team, Anna and Sahana, will be the actors in the concept video. Anna will portray the user with chronic illness. Sahana will portray the doctor.

Video Planning Storyboard

STORYBOARD

person is laying in bed in pain

wants to log, but don't hv energy

um... how do u feel?
dr. → user can't explain to dr how they feel

daily life... class...
user tries to push through

next day..
the flare-up is worse the next day

What causes flare up ??
user is confused what caused it

checks journal, but can't spot trend

introducing
BayMini

I feel...
user tells BayMini verbally

what do u think...
BayMini asks follow up questions

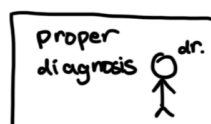

user has dr app

PDF generated for reports

data shown to doctor

proper diagnosis
dr can now diagnose

Thanks BayMini!
user is happy
